Certificate:

La página web del ayuntamiento de Barcelona (https://ajuntament.barcelona.cat/) dispone de un certificado digital que permite autenticar su identidad. Indicad el camino de certificación de este certificado digital, empezando por la entidad final y terminando en la CA raíz, es decir, indicad qué certificados habrá en este camino de certificación y en qué orden se encontrarán en el camino.

Indicad el certificado final con un 1, el certificado de la entidad que lo emite con un 2, y así sucesivamente, hasta llegar a la CA raíz. Si alguno de los certificados no se encuentra en el camino de certificación, marcad la respuesta "Este certificado no se encuentra en el camino de certificación".

Quién tiene que emitir el certificado para el dominio de la uoc (CN \*.uoc.edu) para que nuestro navegador lo considere válido (y, por lo tanto, nos muestre la conexión en el campus como una conexión segura)?

### Seleccione una:

- a. Sólo la CA de la uoc, que es la que tiene la autoridad para hacerlo.
- b. Sólo las CA que se encuentran explícitamente indicadas en la lista de confianza del navegador que utilizamos
- d. DigiCert, que es la única CA que emite certificados para los dominios .edu.
- e. Cualquier CA que se encuentre dentro de la unión europea
- f. Cualquier CA que tenga un camino de certificación hasta una CA que se encuentre en la lista de confianza del navegador que utilizamos. 🗸
- g. Cualquier CA (ya sea raíz o subordinada), que tenga un certificado con la extensión de firma de certificados

Pregunta 7 Correcta Puntúa 1,00 sobre 1,00	Supongamos que los usuarios A y B llevan a cabo un protocolo de tres pasos de Shamir para compartir el mensaje m=851. Para hacerlo, utilizan el criptosistema de exponenciación tal y como se describe en el apartado 1.2 del módulo 7 de la asignatura. Utilizarán como número primo el valor p=907. Suponemos que la clave para cifrar que tiene el usuario A es K <sub>A</sub> <sup>e</sup> = 443 y que la clave para cifrar que tiene el usuario B es K <sub>B</sub> <sup>e</sup> = 109. Indicad cual es el valor que el usuario A le envía al usuario B en el tercer paso del protocolo.

Pregunta 8 Correcta Puntúa 1,00 sobre 1,00	Supongamos que los usuarios A y B quieren ejecutar el protocolo de firma ciega con RSA que se describe en el apartado 3.1 de módulo 7 de la asignatura. El usuario A quiere que B le firme el mensaje m=25636 sin que este conozca el contenido del mismo. Para hacerlo, utilizan el protocolo de firma ciega con RSA. La clave pública de A es (n <sub>A</sub> =15481, e <sub>A</sub> =5995) y su clave privada es d <sub>A</sub> =10435. La clave pública de B es (n <sub>B</sub> =38809, e <sub>B</sub> =34037) y su clave privada es d <sub>B</sub> =15405. El usuario A elige en el paso 1 del protocolo el valor r=9629. Indicad cual es el valor que el usuario B le envia al usuario A en el segundo paso del protocol.
